

Eastern Heating & Cooling Council

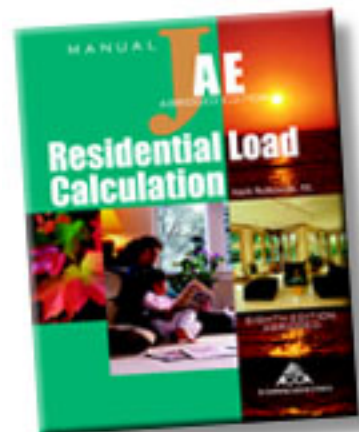

Training for the HVAC Professional

ACCA Manual J version 8AE

This training program will help contractors perform Manual J load calculations properly. This information is vital for residential customers to be eligible for rebates on high-efficiency HVAC equipment (Form B is no longer required, however, a load calculation consistent with ACCA Manual J still is). All newly installed high-efficiency equipment should be sized within fifteen percent of the calculated loads as estimated in accordance with the Air Conditioning Contractors of America (ACCA) Manual J (or an equivalent estimation procedure). This course will help you do just that, and will include, as time allows, a brief demonstration of full-version 8th edition software currently available. **Technicians earn 6 NATE CEHs toward re-certification in all specialties except Refrigeration Installation and/or 3 BPI continuing education credits.**

This course will help you to:

- **Properly perform and document required Manual J load calculations**
- **Qualify customers for utility HVAC rebates**
- **Offer better HVAC performance and energy efficiency**
- **Increase customer satisfaction and comfort**
- **Reduce customer complaints and callbacks**

Registration Fee Covers:

- **Certificate of Attendance**
- **ACCA J 8AE Manual**
- **Practice worksheets**
- **Lunch**

Participants need to bring a calculator!
