

Eastern Heating & Cooling Council

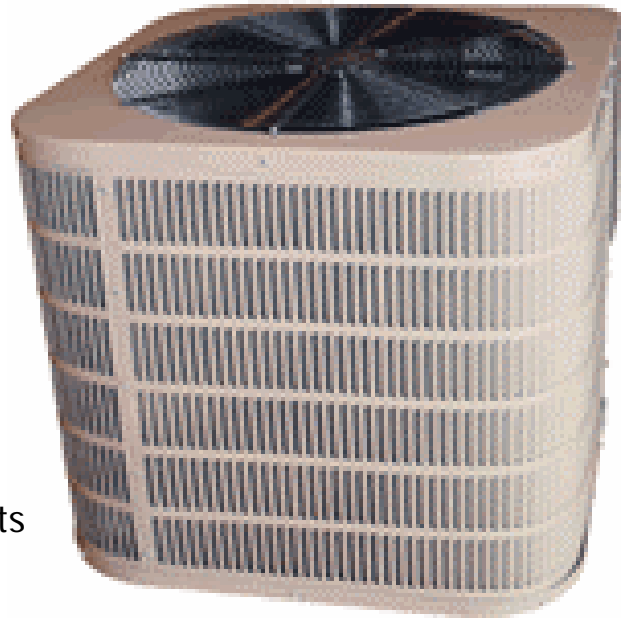

Training for the HVAC Professional

Heat Pump Troubleshooting

This seminar is designed for the technician who is expanding his/her education into the heat pump field. The technician will receive an overview of the heat pump's operation fundamentals. Learning this will provide the technician with a greater understanding of the heat pump system and provide a more logical method of diagnostic procedures. Through the use of computer simulation programs, technicians will learn to diagnose common operational and mechanical defects to troubleshoot and diagnose heat pump system problems faster and more accurately.

COURSE TOPICS:

- Compressors
- Condensers
- Evaporators
- Metering Devices
- Reversing Valves
- Check Valves
- Electrical Schematics
- Defrost Circuit
- Heating Mode
- Cooling Mode
- Supplementary Heat
- Balance Points
- Temperature/Pressure Charts
- Thermostats
- Superheat
- Subcooling

COURSE INCLUDES:

- Certificate of Attendance
- Manual
- Lunch
